Launch Control XL 3 — House Keys Lab 15 (lab/keys, round 15 for 009: real sources)

Every column is one sampled source, all equally loud: 1 Rhodes Mark I (5 velocity layers), 2 the same with stereo vibrato, 3 Steinway grand, 4 Kawai grand, 5 TX81Z FM piano, 6 TX81Z Piano 1, 7 the grand used so far, 8 the GM Rhodes used so far (references).

Shift + the column's fader = Attack chain: tube saturation and the low end rolled off (0 = dry, the start). Rhodes: Brightness and touch also pick the velocity layer (harder = more bark).

The Rhodes samples load from GitHub the first time they play: give it a few seconds. In Mode 2: fader 6 = drums (knob 1 = swing, button 2 = drums out), fader 7 = bass.

Knob Fader Button unused

Guide

What to listen for

Which source is warm by itself, with the knobs as they are? Against 7 and 8 (what we had): does it sound like a record rather than a preset? Then the chain: does it add warmth or only dirt? Note per column: keep / drop and the chain position.

Why off the kick

Stab rhythms that avoid the kick and sit on the off-16ths pull against the beat; hits on the kick double it and sound like a band. Two hits and 3-3-2 do start on the one: that is their weight.

Harmony

One chord only: Am9 in Kerri Chandler's shape (the 7th at the bottom, the 9 instead of the root). Chord changes have their own board: house-harmony-lab.
